Texas Doctor Accused of Defrauding \$3.2 Million From Taxpayer-Funded Healthcare

A clinic allegedly offered TRICARE members \$50 gift cards in exchange for urine

BY WILL MADDOX | PUBLISHED IN HEALTHCARE BUSINESS | APRIL 9, 2021 | 9:00 AM

4 DOCTORS FOUND GUILTY IN \$150M HEALTHCARE FRAUD SCHEME

A federal judge found four Detroit, Michigan-area doctors guilty for participating in a Medicare fraud scheme that cost the federal healthcare program \$150 million.

According to the February **announcement**, the doctors practiced at Tri-County Group where they would bill Medicare for medically unnecessary services, including facet joint injections, urinary drug screens, and home healthcare. Specifically, the doctors would administer the back injections in exchange for prescriptions of over 6.6 million doses of medically unnecessary opioids, the Justice Department reported.

Tri-County received higher rates for facet joint injections than any other medical clinic in the US at the time, and the four doctors all ranked in the top 25 doctors for dollars paid by Medicare for the injections despite working just a few hours a week, according law enforcement authorities.

TEXAS PHYSICIAN SENTENCED 84 MONTHS FOR HEALTHCARE FRAUD

In an October **announcement**, the Justice Department shared that a Houston, Texas-area physician and anesthesiologist at two registered pain clinics, Texas Pain Solutions and Integra Medical Clinic, received seven years in prison for his role in fraudulently billing healthcare programs.

According to the evidence, Rezik Saqer would lure vulnerable patients to the clinics by prescribing opioids, then provide unnecessary and potentially dangerous procedures and tests, many of which were performed by unlicensed staff.

Seqer fraudulently billed healthcare providers for nearly 5 million for these services, which also resulted in multiple patient deaths, the Justice Department reported.

In addition to the prison sentence, the judge also required Seqer to pay \$5 million in restitution.

\$681M SUBSTANCE ABUSE TREATMENT FRAUD CASE IN FLORIDA

The Justice Department **announced** in July charges in a years-long healthcare scheme involving substance abuse treatment in Palm Beach County, Florida.

The department stated that Michael J. Ligotti, DO, was charged with conspiracy to commit healthcare fraud and wire fraud after allegedly engaging in fraudulent billing for tests and treatments involving patients seeking drug and/or alcohol addiction help.

According to the criminal complaint, Ligotti authorized "standing orders" for hundreds of millions of dollars in medically unnecessary urinalysis tests as the owner of Whole Health in Delray Beach, Florida. Ligotti also reportedly paid kickbacks to sober homes or addiction treatment facilities in exchange for having their patients treated by Whole Health providers.

The scheme resulted in \$681 million in fraudulent laboratory testing claims. Some patients were also billed between \$10,000 and \$20,000 by Ligotti and Whole Health for a single day's visit, the Justice Department stated.

FEDS CHARGE 10 INDIVIDUALS IN \$1.4B RURAL HOSPITAL BILLING SCHEME

One of the largest healthcare fraud takedowns in 2020 involved charges against 10 individuals, including hospital managers, laboratory owners, billers, and recruiters, for their alleged involvement in a pass-through billing scheme using struggling rural hospitals in the South.

According to the indictment **announced** in June, the conspirators billed private payers approximately \$1.4 billion for laboratory testing claims, out of which they were paid about \$400 million.

The scheme allegedly involved the takeover of small, rural hospitals that were often experiencing financial hardships and using them as a means to bill private payers for expensive urinalysis drug and blood tests that were largely performed at outside laboratories despite claims stating they were done in-house.

The conspirators also reportedly negotiated higher reimbursement rates for tests done within the rural hospitals versus outside laboratories.

All defendants have been charged with conspiracy to commit healthcare fraud and wire fraud.

Players in the Healthcare System

Health Care Consumer

- Consumes healthcare services
- Pays premium for insurance
- Pays deductible
- After paying the deductible and the premium there is no incentive to consume less healthcare services

Physicians

- Provides the healthcare services
- Gets paid a certain amount from the patient
- Earns more if he provides expensive services

Insurance Company:

- Pays for healthcare service if consumer is insured
- Gets paid premium for insurance
- Has strong incentive to keep costs under control

Incentives lead to high healthcare costs

Tries to keep costs under control
One measure is: Find potential fraud

Dataset

Dataset

Dataset 1/2: Inpatient Data/Outpatient Data

- Claim ID, Claim Start Date, Claim End Date
- Provider, Attending Physician, Operating Physician, Other Physicion
- Claim Diagnosis Code
- Claim Procedure Code

Dataset 3: Beneficiary Data

- Date of Birth, DOD, Gender, Race, State, County
- Chronic Condition: Alzheimer, Heart failure, Kidney Disease, Cancer, Obstr Pulmonary, Depression, Diabetes, Ischemic Heart, Osteoporasis, Rheumatoidarthritis, Stroke
- Annual Reimbursement Amt, IP Annual Deductible, OP Annual Reimbursement, OP Annual Deductible

Dataset 4: Potential Fraud Data

- Provider
- Potential Fraud (Yes/No)

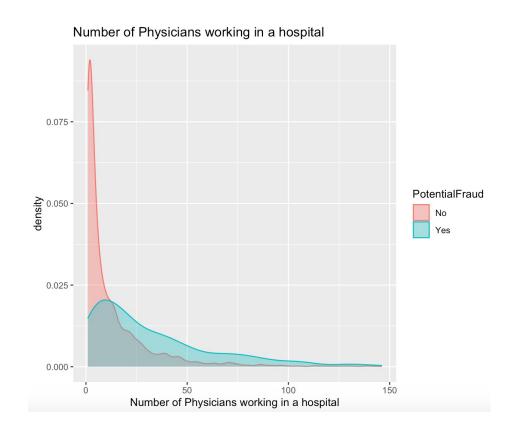

Steps to combine datasets:

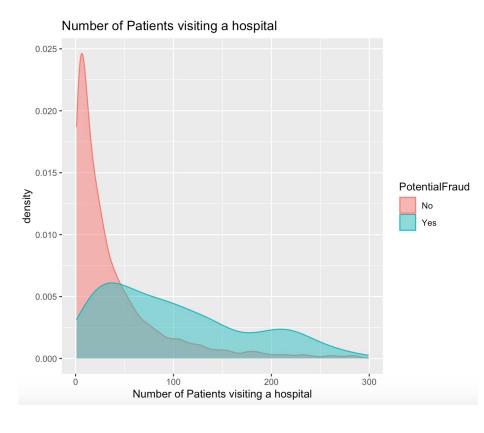

- 1. Combine four datasets provides data on claim level (558'221 claims)
- 2. Aggregate the dataset on the provider level (5'410 provider)

Conclusion

Best performing model:

XGBoost

Performance Test:

0.941 Accuracy

Best performing variables:

- Inpatient Outpatient Ratio
- Sum of insurance amount reimbursed
- Sum of different diagnosis code
- Hospital Rating
- Sum of different attending physicians
- Sum of different beneficiaries
- Mean age
- State

Comments:

- It is very difficult to detect fraud in the health care system.
- This is a case where black box models are not a problem.
